foreword

Rodolfo Miranda
Director, IMDEA Nanoscience Institute
April 2011
Thanks to the hard work and talent of everyone involved, IMDEA Nanociencia is approaching its fruition. 2010 has been an eventful (and successful) year for IMDEA. The achievements in its different tasks, from the organizations of labs to the scientific breakthroughs, from the motivation of the recruited personnel to the construction of the building, are countless.

I would like to acknowledge particularly the enthusiasm of IMDEA scientists and administrators alike. They are shaping a bright future for the Institute and for themselves.

The firm support of the Administrations involved, both regional and national, has to be recognized and appreciated in all its value in moments of crisis and doubts. Keeping among their priorities for 2010 the development of IMDEA Nanociencia, both Administrations light the way that might leads us to a better future as a region and as a country. We, the members of IMDEA Nanociencia, are fully compromised to try our best to give back to the Spanish society the privilege of the support that we have enjoyed. We did it well in 2010 and I believe that we will do it better in the years to come.

1.1. Legal status

IMDEA Nanociencia is a private Foundation created by a joint initiative of the regional Government of Madrid (CM) and the Ministry of Science and Education, now Science and Innovation (MICIIN), of the Government of Spain.

The Foundation manages the Madrid Institute of Advanced Studies in Nanoscience, a new interdisciplinary research centre dedicated to the exploration of basic nanoscience and the applications of nanotechnology in connection with innovative industries.

An agreement was signed in February 2007 by both institutions to share the financial support of the Foundation with a long term commitment.

The Foundation is governed by a Board of Trustees, which contains representatives of the Administrations (CM and MICIIN), some relevant Academic Institutions (Universidades Complutense, Autónoma and Politécnica de Madrid, Consejo Superior de Investigaciones Científicas), industries, members of the Scientific Advisory Committee, and experts in societal implications of nanoscience and technology transfer.

1.2. Strategic Goals

- Attract new talent to Madrid/Spain in areas related to nanoscience and nanotechnology to improve the competitiveness.
- Carry out research of excellence.
- Develop a new model of transfer of knowledge to the private sector based on its incorporation to the definition (and financial support) of medium-term, specific research lines.

1.3. Location

IMDEA Nanociencia has been located provisionally mostly in spaces from the Faculty of Sciences of the UAM and the Faculty of Chemistry of the UCM. The building of IMDEA Nanociencia is located at the Campus of the UAM in Cantoblanco, near Madrid. Given the interdisciplinary nature of research in Nanoscience, the location of the Institute in an environment characterized by its excellence in various related research areas will facilitate its success.

The foundation stone was laid on a public ceremony on January, 13th, 2010. The building is expected to be ready by the summer of 2011. It will have 8,200 m² of space for labs, offices and facilities such as the Center for Nanofabrication of the Campus of Inter-
national Excellence UAM+CSIC or the Center of Ultra-High Resolution Electron Microscopy.

Foundation stone ceremony on January 2010.

The new building of IMDEA Nanoscience will host approximately 100 senior and post-doctoral researchers from different areas, 20 laboratory technicians, 15 staff members for management and administration and the appropriate number of graduate students. The building is designed to have sufficient free space to ensure the rotation of research groups and the future incorporation of new programmes and areas. The Nanofabrication Center of the Campus of Excellence UAM+CSIC and the Center of Ultra-High Resolution Electron Microscopy. The building is expected to be operational in 2011.
1.4. Recruitment Procedure

Staff scientists of IMDEA Nanosciencia are recruited on the basis of International Open Calls in which the candidates present a scientific proposal and a CV. The Scientific Advisory Committee selects a group of candidates to be interviewed by the Direction. After the selection and negotiation process, the candidates are presented to the Board of Trustees and the corresponding offers presented to them. Postdocs and Ph. D. are also recruited on an internationally competitive basis, but selected directly by their corresponding supervisors from the staff. Researchers from different universities, the CSIC or other public institutions may also apply to the same selection procedure and be incorporated to the Institute as associated members for periods of five years to develop specific research projects. The corresponding agreements with different academic institutions have been signed.

1.5. Management Structure
1.6. Board of Trustees

President of the Foundation

Prof. Ivan Schuller
Physics Department and California Institute of Telecommunication and Information Technology (Calit2)
University of California-San Diego. USA

Institutional Trustees

Mrs. Alicia Delibes
Vice-counselor for Education
Madrid Regional Government. Spain

Mr. Jose María Rotellar
General Director for Economics, Statistics, and Technological Innovation.
Madrid Regional Government. Spain

Mr. Jorge Sáinz
Deputy Director for Research, Madrid Regional Government. Spain

Mr. José de la Sota
Managing Director
Fundación madri+d para el Conocimiento, Madrid. Spain

Mrs. Montserrat Torné
(then Mr. Carlos Martínez)
General Director for International Cooperation and Institutional Relations
Ministry of Science and Innovation. Spain

Mr. Félix García-Ochoa
Vicedirector for Research Projects
Ministry of Science and Innovation. Spain

Academic Trustees

Prof. Jesús Eugenio Marco
Consejo Superior de Investigaciones Científicas (CSIC). Spain

Prof. Jose María González-Calbet
Universidad Complutense de Madrid. Spain

Prof. Rafael Garesse
Universidad Autónoma de Madrid. Spain

Scientific Trustees

Prof. Luis Echegoyen
Director of the Division of Chemistry National Science Foundation (NSF). Clemson University. USA

Prof. Emilio Méndez
Director of the Center for Functional Nanomaterials (CFN) Brookhaven National Laboratory Upton, NY. USA

Prof. Héctor Abrúña
Cornell University. USA

Expert Trustees

Mr. Antonio Lafuente
Consejo Superior de Investigaciones Científicas (CSIC). Spain

Mr. Jerry B. Torrance
Consultant-advisor and expert in Technology Transfer in Nanoscience. State of California and the National Nanotechnology Initiative. USA

Company Trustees

Hewlett Packard España
Ramen, S.A
Mr. Eladio Montoya
Mr Emilio Ramiro

Tecnovac, S.A
Mr. César Atienza

1.7. Scientific Advisory Committee

Prof. Héctor Abreuña  
Emile M. Chamot Professor. Cornell University. USA

Prof. Harald Brune  
Director of the Institute of Nanostructures at Surfaces. Ecole Polytechnique Fédérale de Lausanne (EPFL). Switzerland

Prof. Carlos Bustamante  
Howard Hughes Medical Institute. Investigator Professor of Molecular and Cell Biology Physics, and Chemistry University of California, Berkeley. USA

Prof. Luis Echegoyen  
Director of the Division of Chemistry National Science Foundation (NSF). Department of Chemistry, Clemson University. USA

Prof. Andreas Engel  
M.E. Müller Institute, University of Basel Switzerland & Pharmacology Case Western Reserve University. USA

Prof. Michael Graetzel  
Director Laboratory for Photonics and Interfaces (LPI). Ecole Polytechnique Fédérale de Lausanne (EPFL). Switzerland

Prof. Atac Imamoglu  
Institute of Quantum Electronics. ETH Zurich. Switzerland

Prof. René A. J. Janssen  
Eindhoven University of Technology Molecular Materials and Nanosystems. The Netherlands

Prof. Dr. Jürgen Kirschner  
Director at the Max Planck Institut für Mikrostrukturphysik, Halle. Germany

Prof. Emilio Méndez  
Director of the Center for Functional Nanomaterials (CFN). Brookhaven National Laboratory Upton, NY. USA

Prof. Maurizio Prato  
Dipartimento di Science Farmaceutiche. Universita di Trieste. Italy

Prof. Rasmita Raval  
Director of Surface Science Research Centre. University of Liverpool. United Kingdom

Prof. Miquel Salmerón  
Director of the Materials Science Division. Lawrence Berkeley National Laboratory Adjunct Professor, Materials Science and Engineering Department University of California, Berkeley. USA

Prof. Niyazi Serdar Sariciftci  
Director of Linz Institute for Organic Solar Cells (LIOS). Institute for Physical Chemistry Johannes Kepler University of Linz. Austria

Prof. Ivan Schaller  
Physics Department and California Institute of Telecommunication and Information Technology (Calit2) University of California-San Diego. USA

Prof. Fred Wudl  
Department of Chemistry and Biochemistry University of California, Santa Barbara. USA
2.1. Programme 1: molecular nanoscience [14]
2.2. Programme 2: scanning probe microscopies and surfaces [18]
2.3. Programme 3: nanomagnetism [21]
2.4. Programme 4: nanobiosystems: biomachines and manipulation of macromolecules [24]
2.5. Programme 5: nanoelectronics and superconductivity [28]
2.7. Management [32]
Following the recommendations of the Scientific Advisory Committee, which were approved by the Board of Trustees of IMDEA-Nanociencia on the meeting of December 2007, the Institute has started 6 Research Programmes plus a horizontal Programme on nanofabrication. They have been selected on the basis of their interest and the existing capabilities (and limitations) to achieve international impact.

**Programme 1**  
Molecular Nanoscience

**Programme 2**  
Scanning Probe Microscopies and Surfaces

**Programme 3**  
Nanomagnetism

**Programme 4**  
Nanobiosystems: Biomachines and Manipulation of Macromolecules

**Programme 5**  
Nanoelectronic and Superconductivity

**Programme 6**  
Nanoacustics and Nanophotonics/ Nanooptics
programme 1
molecular nanoscience

This programme deals with the design and synthesis of molecular nanostructures and nanomateriales, their spectroscopic characterization, in particular, their time-resolved optical response, and their self-assembly at surfaces. The expertise required includes the functionalization of different nanoforms of carbon, organometallic compounds and semiconducting quantum dots to self-organize on surfaces by means of covalent or supramolecular approaches and the implementation of various spectroscopic techniques, including spectroscopy on single molecules. Among the practical objectives of the Programme one may cite the optimization of organic solar cells and other functional organic devices.

Prof. Nazario Martín León
Programme Manager

Nazario Martín is full professor of Organic Chemistry at the University Complutense of Madrid and vice-director of the Institute for Advanced Studies in Nanoscience of Madrid (IMDEA-Nanoscience). Professor Martín’s research interests span a range of targets with emphasis on the molecular and supramolecular chemistry of carbon nanostructures such as fullerenes and carbon nanotubes, p-conjugated systems as molecular wires, and electroactive molecules, in the context of electron transfer processes, photovoltaic applications and nanoscience. He has published over 380 papers in peer reviewed journals, given over 200 lectures in scientific meetings and research institutions, and supervised 22 theses. He has co-edited six books related with carbon nanostructures and he has been invited as guest editor for seven special issues in well known international journals. Professor Martín has been visiting professor at UCSB and UCLA (California, USA) and Angers and Strasbourg (France) universities. He is currently a member of the Editorial Board of Chemical Communications, and he has served as General Editor of the Spanish journal Anales de Química (2000-2005) and as a member of the International Editorial Advisory Board of The Journal of Materials Chemistry (2000-2006). He is currently the Regional Editor for Europe of the journal Fullerences, Nanotubes and Carbon Nanostructures and a member of the International Advisory Board of The Journal of Organic Chemistry (ACS) and ChemSusChem (Wiley-VCH). He is a member of the Royal Academy of Doctors of Spain as well as a fellow of The Royal Society of Chemistry. Since 2006, he is the President of the Spanish Royal Society of Chemistry and, more recently, he has been the recipient of the “Dupont Prize of Science” in 2007.

Optical spectroscopy of polyconjugated materials

Prof. Johannes Gierschner
Senior researcher
Ph.D.: University of Tübingen, Germany
Previous Position: University of Tübingen, Germany

Johannes Gierschner received his PhD in 2000 in Tübingen (Germany), followed by a position as teacher, researcher, and institute manager. In 2004 he moved to Mons (Belgium) with D. Beljonne & J. Comi, including a 4-month stay with J.-L. Brédas at Georgia Tech. Since 2008 he is Ramón y Cajal research fellow and Senior Researcher at IMDEA Nanoscience. He was visiting researcher in Valencia (2008-10) and holds regular visiting researcher positions in Tübingen and Seoul National University. JG has coordinated two European Marie Curie projects and has published more than 50 peer-reviewed papers (1200 cites, h = 18).

Research lines
JG’s work integrates steady-state and time-resolved optical spectroscopy with quantum-chemical methods to achieve an in-depth understanding of the optical and photophysical properties of conjugated organic materials for optoelectronic applications, which he investigates in solution, supramolecular nanostructured host-guest compounds, thin films, suspended nanoparticles and single crystals.

Relevant publications.

Femtosecond spectroscopy on molecular systems

Prof. Larry Luer
Senior researcher
Ph.D.: University of Tübingen, Germany
Previous Position: Politecnico di Milano, Italy

Larry Luer (born in Leutkirch / Germany in 1965) received his PhD at the University of Tübingen in 2001, studying the photocconductivity of organic conjugated molecules. In 2001/2002, he held a Marie Curie Individual fellowship at Politecnico di Milano in the group of Guglielmo Lanzani, investigating ultrafast charge carrier generation in organic conjugated molecules. From 2003-2009, he was senior researcher at Politecnico di Milano, focused on ultrafast events in low dimensional conjugated materials, such as carbon nanotubes and purple bacterial light harvesting systems. Since 2009, he is Senior researcher at IMDEA nanociencia.

Research lines
- Vectorial energy transfer in purple bacterial light harvesting systems
- Ultrafast charge and energy transfer in Carbon nanotubes
- Environmental stability of organic photovoltaic systems
- Photophysical characterization of novel materials for organic photovoltaics.

Relevant publications
Hybrid systems based on semiconductor nanoparticles

Dr. Beatriz Hernández Juárez  
Researcher  
Ph.D.: Universidad Autónoma de Madrid, Spain  
Previous Position: University of Hamburg, Germany

Beatriz Hernández is a researcher in the frame of the “Ramón y Cajal” programme at IMDEA Nanoscience. She received a B.Sc. degree in Chemistry from the Universidad Complutense de Madrid (UCM) in 1999 and a Ph.D degree in Material Sciences from the Universidad Autónoma de Madrid (UAM) in 2005 with a work on Photonic Crystals supervised by Prof. C. López. Dr. Hernández also worked for almost 2 years in Lucent Technology, a factory devoted to the fabrication of microelectronic circuits in a clean room laboratory. After finishing the PhD, she moved to the Laboratoire de Photonique Quantique et Moléculaire (LPQM) in Paris. After a short stay, she joined the group of Prof. Dr. Horst Weller in Hamburg (http://www.chemie.unihamburg.de/pac/weller/index.html) with a Marie Curie Individual Intra European Fellowship.

Research lines  
· Studies about the interactions between carbon nanotubes or graphitic surfaces and semiconductor nanoparticles. Synthesis, analytical, electrochemical and microscopical characterization.  
· Composites based on carbon fibers for mechanical and electrical aims.  
· Synthesis and optical characterization of hybrid systems composed of semiconductor and metallic nanoparticles.  
· Quantum dots in photonic crystals.

Supramolecular chemistry and self-assembly of functional materials

Dr. Emilio Pérez Álvarez  
Researcher  
Ph.D.: University of Edinburgh, UK  
Previous Position: Universidad Complutense de Madrid, Spain

Dr. Emilio M. Pérez obtained his BSc and MSc from the Universidad de Salamanca. He joined the group of Prof. David A. Leigh at the University of Edinburgh, where he obtained his PhD in 2005. He then carried out postdoctoral studies within the group of Prof. Nazario Martin at Universidad Complutense de Madrid. In December 2008 he joined IMDEA Nanoscience. He has received the 2006 IUPAC Prize for Young Chemists, the 2009 RSEQ Prize for Novel Researchers and the 2010 UCM Foundation Prize for Science and Technology. His main research interests concern supramolecular chemistry and the self-assembly of functional materials.

Research lines  
· Synthesis of organic molecular materials.  
· Molecular recognition of carbon nanostructures.  
· Supramolecular chemistry.  
· Self-assembly of functional materials.

Relevant publications  
Design and synthesis of molecular nanostructures and nanomaterials

Dr. Juan Luis Delgado de la Cruz
Researcher
Ph.D.: Universidad de Castilla-La Mancha, Spain
Previous Position: Universidad Complutense de Madrid, Spain

Juan Luis Delgado obtained his PhD in Chemistry (2004) from the Universidad de Castilla-la Mancha, with a work on materials for photovoltaic applications. He then joined the group of Prof. Jean-François Nierengarten, at the CNRS (Strasbourg and Toulouse, France) working on covalent and supramolecular fullerene chemistry and conjugated systems (2005-2006). Currently, he holds a “Ramón y Cajal” research contract at IMDEA-Nanociencia, where he is focused on the synthesis and design of new carbon-based energy storing materials for the development of more efficient organic photovoltaic devices. He is co-author of more than 50 papers and book chapters, and currently, he is the president of the group of Young Chemists Researchers of the Spanish Royal Society of Chemistry (RSEQ) http://www.rseq.org/jiq.htm.

Research lines
- Improvement of the performance of Bulk HeteroJunction (BHJ) Solar Cells. We are focused on the synthesis of new donor and acceptor light harvesting materials in order to prepare more efficient solar cells.
- Synthesis of donor-acceptor and donor-acceptor -acceptor systems, to study the electron transfer events that take place on these systems.

Pump probe and photoinduced absorption spectroscopies

Dr. Juan Cabanillas González
Researcher
Ph.D.: Imperial College London, UK
Previous Position: Politecnico di Milano, Italy

Juan Cabanillas González got a degree in Physics at Universidad de Santiago de Compostela in 1999. In 2004 he completed a PhD at Imperial College London working with photophysics of t-conjugated polymer-based blends for photovoltaic applications. Between 2003-2006 he worked as post-doc at Politecnico di Milano with electric field assisted pump-probe spectroscopy. Between 2006-2009 he held a research fellowship to investigate the use of electromodulated spectroscopy coupled to confocal microscopy for charge density mapping in organic planar photodetectors. Since 2009 he is Ramon y Cajal researcher at IMDEA Nanociencia.

Research lines
- Processes: Charge generation/recombination, charge transport, exciton dynamics, optical gain, morphology.
- Materials: π-conjugated polymers and oligomers, hybrid inorganic-organic semiconductors, colloidal semiconductors.
- Techniques: Time-resolved spectroscopy (pump –probe, transient absorption, time resolved fluorescence), electromodulated spectroscopy (CW and transient Stark), OLED and solar cell characterization, optical gain characterization.

Relevant publications
The use of advanced microscopies and spectroscopies with atomic resolution is essential to characterize matter at the nanoscale. The scientists involved in this programme develop advanced Scanning Probe Microscopes, mostly STM, AFM and Photoelectron Microscopy to investigate problems such as the epitaxial growth of graphene, the self-assembly of molecules at surfaces, the realization of inelastic spectroscopy at the level of single molecules or the spin polarized imaging of magnetic nanostructures. Friction at the nanoscale and theoretical modelling are also involved. Activities of this programme have implications for aeronautics and energy applications and closely interact with the ones of Programmes 1 and 3.

Relevant publications
Nanotribology

Prof. Enrico Gnecco
Senior Researcher
Ph.D.: University of Genova, Italy
Previous Position: University of Basel, Switzerland

Enrico Gnecco received his PhD in Physics from the University of Genova in 2001, and worked for almost 10 years at the University of Basel before moving to IMDEA Nanociencia. Among other topics, he investigated the frictional response of crystal surfaces in UHV, the onset of abrasion wear on the atomic scale, the transition from stick-slip to superlubricity, the phononic and electronic contributions to dissipation in close proximity to solid surfaces, and the confinement of organic molecules on insulating surfaces. Enrico Gnecco coauthored more than 50 peer-reviewed articles (h-index 14) and several book chapters.

Research Lines
At IMDEA Nanociencia Prof. Gnecco is responsible for research on nanotribology, i.e. the study of friction, adhesion and wear processes on the nanometer scale. His approach to this topic is both experimental (atomic force microscopy and related techniques) and theoretical (analytical models based on classical mechanics and reaction rate theory).

Juan Manuel Benayas
Technician

The ultimate goal of his work is to control friction and particle manipulation at the nanoscale.

Graphene growth and spectroscopy with low-T STM

Prof. A. L. Vázquez de Parga
Associated Senior Scientist
Ph.D.: Universidad Autónoma de Madrid, Spain
Previous Position: Universidad Autónoma de Madrid, Spain

Amadeo L. Vázquez de Parga got his PhD in 1992 at the Universidad Autonoma de Madrid (UAM). Construction of a Scanning Tunneling Microscope (STM) working in ultra high vacuum, the first in Spain. He carried out a postdoc stay at IBM Research Laboratory in Rüschlikon (Switzerland) in photoluminescence excited by the STM. From 1999 Prof. Vázquez de Parga is Associate Professor in Condensed Matter Physics at the UAM and from 2008 Associated Senior Researcher at IMDEA-Nanoscience.

2002-2003 visiting researcher at the Radboud University, Nijmegen (The Netherlands), working on spin polarized STM

Short research stays at Lawrence Berkeley Laboratory, California (1990), Max Planck Institute in Halle (Germany) (2000) and at University of Gakushuin, Tokio (Japan) (2004)

Research lines
Currently we are working on graphene grown on different transition metals studying the crystallographic and electronic properties. Graphene is also used as substrate for molecular deposition. We are currently doing spin polarized STM measurements on molecules deposited on magnetic substrates. Another research line is the study of molecular self-assembly on metallic surfaces. The main techniques are scanning tunneling microscopy and spectroscopy, Low energy electron diffraction, Auger spectroscopy and X-ray photoelectron spectroscopy.

Atomic and molecular self-assembly at surfaces

Dr. Roberto Otero Martin
Associated Junior Scientist
Ph.D.: Universidad Autónoma de Madrid, Spain
Previous Position: Universidad Autónoma de Madrid, Spain

Dr. Roberto Otero received his Ph.D. degree from Universidad Autónoma de Madrid in 2002 under the supervision of Prof. Rodolfo Miranda, working on the relations between the electronic structure and the morphology of inorganic nanostructures. He then moved to the University of Aarhus, Denmark, where he joined the group of Prof. Flemming Besenbacher as a postdoctoral assistant. There, he got involved in the research about the self-assembly of organic molecules on solid surfaces by Variable-Temperature, Fast-Scanning Tunneling Microscopy. He is presently a Ramón & Cajal Associate Professor at Universidad Autónoma de Madrid and, since 2008, Associated Researcher at IMDEA Nanoscience.

Research lines
The current scientific interest of Dr. Roberto Otero focus on the structural and chemical characterization of the interfaces between metals and organic materials, interfaces which are important for the performance of many organic electronic, optoelectronic and photovoltaic devices. For carrying out such studies, Dr. Roberto Otero uses an optimized experimental system that combines X-Ray Photoelectron Spectroscopy (XPS) and Variable-Temperature Scanning Tunneling Microscopy (VT-STM).

This Programme deals with the preparation and characterization of Advanced Magnetic Nanomaterials and explores some of their biomedical applications. The materials, both inorganic and organic, are grown by Molecular Beam Epitaxy (MBE) in ultra-high vacuum environment, by sputtering or by chemical synthesis. They are ultrathin films, superlattices, or nanoparticles and their magnetic properties are characterized by morphological, structural, electronic, and (mostly optical) Magnetometry techniques. Additionally, large scale experimental facilities (i.e., synchrotron, neutron, or ion-accelerator sources) are often used to elucidate some fundamental aspects. Particular emphasis is placed on magnetization reversal processes of low-dimensional artificial magnetic structures. The preparation and characterization of magnetic nanoparticles for use in Nanobiomedicine has recently emerged as an important research line in this Programme with the aim to develop ultrasensitive NMR molecular imaging agents, magnetic carriers for in vivo targeting of therapeutic compounds or hyperthermia treatment of cancer. Appropriate theoretical modelling also plays a role in the Programme.

Growth and characterization of magnetic nanomaterials

Prof. Julio Camarero de Diego
Associated Senior Scientist
Ph.D.: Universidad Autónoma de Madrid, Spain
Previous Position: Universidad Autónoma de Madrid, Spain

Julio Camarero received his PhD in physics from the Universidad Autónoma de Madrid in 1999. He then worked at Institut Néel-CNRS France (Marie-Curie Fellow and scientific contracts) before returning to UAM in 2003 as Ramón y Cajal research fellow. He is currently Associate Professor of the Condensed Matter Physics Department and Secretary of the Institute of Materials Science “Nicolás Cabrera”. In 2008 he joined the Nanomagnetism Group at IMDEA Nanoscience as Associated Senior Scientist. He has published more than 60 regular papers (> 950 cites, h-index: 16), 9 book chapters, 4 invited papers, and 1 EU patent. 20 invited talks at international conferences (150 other conference presentations). Dr. Camarero is a frequently invited scientist in different Synchrotron Radiation Facilities (60 weeks).

Research Lines
Currently, his goal is to acquire a better understanding of the fundamental physics of new functional properties that are important, or may become important, for applications in Spintronics and Biomedicine areas. His main scientific interests are: development of new hybrid (inorganic-organic) magnetic nanostructures, magnetization reversal processes, polarization dependent x-ray spectroscopy and microscopy, sub-nanosecond and element resolved magnetization reversal dynamics, nanomagnetism and biomedicine.

This programme includes several research lines which deal with the study of macromolecular complexes, their structure and functional properties, as well as their interaction with defined substrates to build synthetic tools. In the area of Single-molecule Analysis of Macromolecular Aggregates, there are groups working on AFM analysis of biological nanomachines, force spectroscopy analysis and manipulation of macromolecules and their aggregates, the study of nanomechanical properties of biological complexes of different complexities, and optical trapping-based approaches to study the behaviour of biological nanomotors. Other systems under study are tailor-made polypeptides of increasing complexity designed to dissect relationships between molecular structure and functional properties. A second area of interest in this Programme is the Organization of Macromolecular Aggregates on Well-defined Substrates. Biological membranes, the protein folding and viral assembly pathways, the bacterial cytoskeleton and the DNA structure are examples of self-organizing systems with highly specialized functions and properties. Different groups of the Programme are collaborating with the Programme of Nanoelectronics of the Institute for the study of organic surfaces as potential substrates for macromolecular ordered interaction, and the incorporation of macromolecules and biological assemblies into metal nano particles as transporters.

Prof. José L. Carrascosa
Programme Manager

Prof. Carrascosa is Research Professor of the CSIC and Director of the Department of Structure of Macromolecules at the Centro Nacional de Biotecnología. He has been involved in the development of advanced microscopy methods for the structural analysis of biological material, with special emphasis in the study of different viral model systems. His activity has produced near 200 publications with an H index of 40. Prof. Carrascosa has carried out an extended international activity: President of the European Microscopy Society (2000-2004), member of the Scientific Advisory Board of the European Synchrotron Radiation Facility (1995-1996; 2003-2005; 2006-2008), and Chairman of the Scientific Advisory Committee of ERA-Instruments (2008-2011), among others. He has been President of the Spanish Biophysical Society (2003-2007) and President of the Spanish Society of Cell Biology (1993-1996). Prof. Carrascosa is member of the editorial boards of the Journal of Structural Biology and Micron.

Protein engineering and biofunctional nanostructures

Prof. Aitziber L. Cortajarena
Senior Researcher
Ph.D.: Universidad del País Vasco, Spain
Previous Position: Yale University, USA

Dr. A.L. Cortajarena earned her Ph.D. in Biochemistry from the Universidad del País Vasco in 2002. Then, she joined the group of Dr. L. Regan at Yale University, USA, as a Postdoctoral Fellow. She worked on protein design, structure, and function. In 2006, she was Visiting Scientist at the Weizmann Institute, Israel, with Dr. G. Haran working on single molecule spectroscopy. Then, continued her work at Yale University, as an Associate Research Scientist with Dr. Regan. She joined IMDEA Nanociencia as Group Leader in January 2010. Her research focuses on protein design toward the application of novel proteins in nanobiotechnology.

Research lines
- Design recognition protein modules as tools in nanobiotechnology
- Self-assembly of designed proteins into tailored nanostructures
- Synthesis, characterization of helical repeat proteins for silicon nitride nanopores translocation studies
- Polymer surface bio-functionalization for biosensors applications
- Magnetic nanoparticles bio-functionalization for cancer treatment and therapy

Optical nanomanipulation in molecular and cell biophysics

Dr. Ricardo Arias-González de la Aleja
Researcher
Ph.D.: Universidad Complutense de Madrid, Spain
Previous Position: Centro Nacional Biotecnología (CNB-CSIC), Madrid, Spain

Dr. Arias-González received both his Master Degree in Theoretical Physics in 1997 and his Ph.D. in 2002 from Complutense University in Madrid. During his Ph.D. research in the Materials Science Institute, Madrid, and short stays in École Centrale Paris and EMBL Heidelberg, he developed theory and simulations to understand the electromagnetic field in nanoparticles. Then, he moved to U.C. Berkeley for his postdoctoral training, where he studied DNA with single molecule approaches. In 2006, he worked at the National Centre of Biotechnology, Madrid, where he developed a state-of-the-art optical tweezers. Since 2008, he has joined IMDEA Nanoscience, leading of the Optical Nanomanipulation Lab.

Research lines
Dr. Arias-González is working in the field of Molecular and Cell Biophysics, furthering the study of the macromolecules that make up the machinery of cells. His research lines cover three fundamental scale levels in Biology, namely, the molecule, the organelle and the cell. Specifically, his team investigates structural transitions of nucleic acids, molecular motors and electrophysiology of organelles from the single-molecule point of view. He is also interested in the development of biophysical techniques for these research purposes.

Modified oligonucleotides in nanobiomedicine: RNA interference and sensors

Dr. Álvaro Somoza Calatrava
Researcher
Ph.D.: Universidad Autónoma de Madrid, Spain
Previous Position: Instituto de Investigaciones Biológicas (IRB-Barcelona), Barcelona, Spain

Álvaro Somoza studied Chemistry at Universidad Autónoma de Madrid where he did his PhD, under the direction of Prof. Carmen Carreño, focused on the total synthesis of Rubiginones. He then joined the group of Prof. Eric Kool at Stanford University. There he worked on a project focused on the use of modified oligonucleotides to study the role of steric and hydrogen bonding interactions in RNA interference. Later, he moved to Barcelona to work with Dr. Ramón Eritja at the IRB, where he started a project devoted to the study of the interactions between RNA strands and the protein involved in RNA interference. He is junior scientist at IMDEA since 2008.

Research Lines
The research of Dr. Somoza is focused on the preparation of modified oligonucleotides for different applications. Particularly, modified RNAs are prepared to study the interactions with AGO proteins in RNA interference. These modifications are also evaluated aiming to improve the properties of siRNAs in gene inhibition.

In addition, oligonucleotides are used to assemble nanostructures for different applications such as sensors.

Relevant Publications

Optical and magnetic tweezers

Dr. Borja Ibarra Urruela
Researcher
Ph.D.: Universidad Autónoma Madrid, Spain / CNB-CSIC Madrid, Spain
Previous Position: Centro Nacional Biotecnología (CNB-CSIC), Madrid, Spain

Borja Ibarra received his PhD. in Molecular Biology from the Universidad Autónoma de Madrid in 2001. He made the “leap” to molecular biophysics as a postdoctoral fellow at University of California, Berkeley. There, he learned the techniques of single-molecule force spectroscopy and using optical tweezers he developed a single-molecule mechanical assay to study the dynamics of molecular motors involved in DNA replication. Back in Spain in 2007, he applied this technology at the CNB-CSIC to study biological molecular motors at single molecule level. He joined the Nanobiosystems research line at IMDEA Nanoscience in 2010.

Research Lines
Many essential processes inside the cell involve mechanical tasks, which are carried out by specialized proteins called molecular motors. They are able to convert chemical energy into mechanical work at the molecular scale and therefore, present interesting biomedical and nanotechnological applications. In our laboratory we use single molecule manipulation techniques to understand the physical mechanism by which these molecular machines operate.

José Alberto Morín
PhD student
AFM / Fluorescence microscopy of biomembranes

Prof. Marisela Vélez Tirado
Associated Senior Scientist
Ph.D.: University of Michigan, USA
Previous Position: Instituto de Catálisis CSIC, Madrid, Spain

Degree in Biology (biochemistry) Autonomus University of Madrid (June 1982). Doctor of Philosophy (Ph.D): Biophysics. University of Michigan (USA) (August 1989). Dr. Vélez returned to Spain to work on the application of time resolved fluorescence spectroscopy of membrane fluorescent probes at the Physical Chemistry Institute "Rocasolano" (CSIC). Dr. Vélez joined the Condensed Matter Department at the Universidad Autonoma de Madrid (UAM) to work on the structural characterization and development of amperometric biosensors based on the controlled anchoring of redox proteins. In 2001 she returned to the UAM and started working on the structural and mechanical characterization of the membrane associated protein complexes involved in bacterial cell division. Since 2008? Dr. Velez is currently at the CSIC, at the Instituto de Catálisis y Petroleoquimica.

Research lines
Dr. Vélez’s main research interest is related to understanding biological processes that take place on biological surfaces. She has worked on reconstituting in vitro the initial stages of the bacterial division complex. Her approach is to characterize the structure and dynamics at the single molecular level of the polymerization process of the main participant, the bacterial cytoskeletal protein FtsZ. High resolution information of the surface polymerization process under different conditions is analysed theoretically to better understand the main protein-protein interactions governing the assembly process. She has more recently started a new research line related to the use of self assembling biological structures as biotemplates to organize inorganic gold or magnetic particles.

Relevant publications

Mechanical properties of proteins

Prof. Mariano Carrión Vázquez
Associated Senior Scientist
Ph.D.: Universidad Autónoma de Madrid, Spain
Previous Position: Instituto Cajal-CSIC Madrid, Spain

Mariano Carrión-Vázquez studied biochemistry in the University of Valencia, obtaining his PhD in neurobiology in 1993 at the Universidad Autónoma de Madrid. With Prof. Julio Fernández he focused later on protein nanomechanics, first as a postdoctoral student at the Mayo Clinic (Rochester, MN) and later as an assistant professor at the Columbia University (New York, NY). He developed the methodology of polyproteins as unequivocal single-molecule markers, which has allowed the later progress of the field. In his group at the Cajal Institute (CSIC) and IMDEA Nanoscience he focuses on the nanomechanics of proteins of the nervous system.

Research lines
General title: Protein nanomechanics
- Nanomechanics of proteins from the nervous system: cell adhesion proteins, membrane fusion proteins and scaffolding proteins.
- Nanomechanical analysis of branched nanomachines from the nervous system: proteasome, chaperones and adhesion machinery.
- Development of force sensors for the nanomechanical analysis of proteins in vivo.
- Applications of nanomechanical analysis to proteomics.

Relevant publications
programme 5
nanoelectronics and superconductivity

This programme deals with the Electric Transport in Nanosystems. Alternative approaches to the silicon-based semiconductor industry may involve devices based on graphene nanostructures or transport through single molecules. Chemical synthesis to tailor molecular structure and functionality (in connection with Programme 1), systematic variation of temperature and/or vacuum conditions and theoretical computations are necessary complements to gain a wider perspective in molecular electronics. A second area of interest are Superconducting Nanostructures, i.e. mesoscopic superconductors fabricated as superlattices, nanowires or nanodots, where the way in which confinement and proximity phenomena between superconductors and materials with other properties (e.g. magnetic) affect superconductivity can be explored.

Electric transport in nanosystems

Prof. Nicolás Agraït de la Puente
Associated Senior Scientist
Ph.D:UNED, Spain
Previous Position: Universidad Autónoma de Madrid. Spain

Nicolás Agraït got a Ph. D. in Physics from the UNED. He is Full Professor since 2007 at the Condensed Matter Physics Department of the UAM and Senior Associated Researcher at IMDEA-nanoscience. He is well-known for his pioneering work in quantum transport and forces in atomic-sized contacts and atomic chains, and has over 50 publications in peer-reviewed journals summing over 3,500 citations. Prof Agraït and collaborators have developed several novel local-probe systems for these measurements. They have very recently applied these techniques to single molecules successfully measuring transport and vibrational spectroscopy.

Research lines
- Transport through single molecules. Systematic study of transport properties at the single molecule level using STM.
- Atomically-thin crystals. Study of local mechanical and electronic properties of graphene and dichalcogenide crystals, using STM and AFM.
- Single molecule magnets. Study of the influence of substrate, including graphene and semiconducting atomically-thin crystals, on their magnetic properties using STM at low temperature.

Relevant publications
Electrical conductivity of single molecules

Dr. Teresa González Pérez
Researcher
Ph.D. Universidad de Santiago de Compostela, Spain
Previous Position: University of Basel, Switzerland

Teresa González graduated in Physics in 1996 from the University of Santiago de Compostela (Spain). Where she got a Ph. D. in 2003 with a work on melt-textured high-Tc superconductors that was awarded with the Premio Extraordinario de Doctorado. From 2004 to 2008 Dr. González has been Research Assistant at Basel University (Switzerland) with Professor Christian Schönberger. She worked on the electrical properties of single molecules in a MCBJ setup. She joined IMDEA-Nanociencia as a Ramón y Cajal research fellow in 2008.

Research lines
Molecular electronics, dealing with the electrical properties of single molecules using a scanning tunnelling microscope and exploring different techniques to contact an individual molecule, and study its properties under different conditions, at low and room temperatures. Currently her research interests deal with the testing conductivity of molecules such as alkanes, oligo(phenylene-ethynlenes), fluorenes, phthalocyanines; and different chemical binding groups such as thiols, amines or C60.

Fabrication and properties of nanostructured superconductors

Dr. David Pérez de Lara
Researcher
Ph.D.: Istituto di Cibernetica del CNR, Italy / Instituto Nacional de Física Nuclear (INFN), Italy
Previous Position: Universidad Complutense de Madrid, Spain

Graduated in Theoretical Physics at UAM (1994), David Pérez de Lara got a PhD from UAM-IC-CNR in 2003. he has had positions at ESA/ESTEC (The Netherlands 2 years), Istituto di Cibernetica of the National Italian Research Council (IC-CNR) in Milan, Italian Istituto Nazionale di Fisica Nucleare (INFN) (3 years), ‘Decoherence and Entanglement in Quantum Complex Systems (DEQUACS-INFM 1 year), Fondi per gli Investimenti della Ricerca di Base (FIRB) of the Italian Ministry (MUR 3 years) and Universidad Complutense de Madrid (3 years). He had joined IMDEA Nanociencia in 2010.

Research lines
The main research activity is focused on the fabrication, experiments at low temperatures and modelization of superconducting devices with magnetic nanoarrays. Vortex dynamics and ratchet effects in superconductors are some relevant topics under investigation. This investigation is related to the development of superconducting-magnetic hybrid electronic devices based on a controlled and directional vortex rotation.

Relevant publications
programme 6
nanoacoustics and nanophotonics/nanooptics

The programme deals with Nanoacoustics and Nanophotonics, which have to do with phenomena in which either the (acoustic or optical) radiation or the matter are confined at sub-micrometer dimensions. In nanoacoustics, phase-sensitive acoustic microscopy, imaging, and non-destructive testing are developed, while the field of nanophotonics is both a Nobel Prize-winning science and a multibillion-dollar industry, underpinning applications such as telecommunications, data storage, and materials processing. Nanostructures and nanostructured materials exhibit fascinating optical response, and nanoscale-optics has already shown many surprises, such as extraordinary optical transmission, superlensing, giant field enhancement, optical trapping, and imaging with resolution far beyond the diffraction limit.

We also explore semiconductor materials as advantageous candidates to be the physical basis of storage and manipulation of quantum information. The growth and characterisation of semiconductor nanostructures, and photonic devices, such as LEDs, Lasers, pillars and photonic crystal cavities is also relevant for activities in Programme 1). The scientists in this Programme have developed optical microscopy in the near and far field, optical spectroscopy with coherent and nonlinear techniques, Raman and FTIR spectroscopy and spectroscopic SNOM.
Nanooptics and nanoacoustics

Prof. Reinhold Wannemacher
Senior Researcher
Ph.D: University of Darmstadt, Germany
Previous Position: University of Darmstadt, Germany

Reinhold Wannemacher received his doctoral degree from Technische Universität Darmstadt and his Habilitation” from Johann Wolfgang Goethe-Universität, Frankfurt, Germany. His scientific work in the areas of Optics and Acoustics was partly performed at The University of Georgia, IBM Almaden Research Laboratory, and Rijksuniversiteit Leiden. He has been a Guest Professor for Nano-Optics at Technische Universität Chemnitz, as well as a member of the Faculty of Physics and Geo-sciences of the University of Leipzig. He is the author of about 70 scientific articles.

Research lines
Nano-Optics, Optical microscopy in the near and far field. Optical spectroscopy, including coherent and nonlinear techniques, such as pump-probe, optical coherent transients, spectral hole-burning, optical-magnetic double resonance, up-conversion. Raman and FTIR spectroscopy. Mie scattering. Phase-sensitive acoustic imaging, imaging, and non-destructive testing.

Dr. Daniel Granados Ruiz
Researcher
Ph.D.: Universidad Autónoma de Madrid, Spain.
Previous Position: Toshiba Research Europe Ltd. (TREL), Cambridge, UK

Daniel Granados worked for a Ph.D. at the group of molecular beam epitaxy of IMM-CNM-CSIC, on the growth and characterisation of III-V semiconductor Nanostructures. For six months he was an invited researcher at the Nano-Optics group of the Heriott-Watt University in Edinburgh (Scotland), working on single Quantum dot optical characterisation. After this, Dr. Granados joined the Quantum Information Group of Toshiba Research Europe Ltd in Cambridge (UK), as a research scientist; working on photon confinement and cavity quantum electrodynamics. He joined IMDEA-Nanoscience in September 2009.

Research lines
My research interests are the growth and characterisation of semiconductor nanostructures, and the development and characterisation of photonic devices, such as LEDs, LASERS, pillars and photonic crystal cavities, for opto-electronics, quantum optics and quantum information applications.

Oral communication

07-10/07/2010
IV Spanish-Portuguese Biophysical Congress, July 7-10 2010, Zaragoza, Spain

Posters
- Tryptophan mutations in hirsutellin A produce a non-cytotoxic but ribonucleolytically active ribotoxin. Herrero-Galán, E., Lacadena, J., Martínez Del Pozo, A., Olmo, N., Oñaderra, M., Gavilanes, J.G.
- Condensation prevails over B-A transition of single DNA molecules. Silvia Horneño, Fernando Moreno-Herrero, Borja Ibarra, José L. Carrascosa, José María Valpuesta & J. Ricardo Arias-González
- The Phi29 DNA Polymerase Presents an Active DNA Unwinding Mechanism. Borja Ibarra, Jose Morin, Jose M. Valpuesta, Margarita Salas, Jose L. Carrascosa
- Mechanical properties of β-catenin. A. Valbuena, A.M. Vera, J. Oroz, M. Menéndez, y M. Carrión-Vázquez
- Testing the mechanical hypothesis in scaffolds: the effect of natural linkers and cellula-se binding. A. Galera-Prat, A.M. Vera, A. Valbuena, J. Oroz y y M. Carrión-Vázquez
- Nanomechanics of the tip-link cadherins and its role in hearing. J. Oroz, A. Valbuena, A. Gale-ra-Prat., R. Hervás, U. Müller, y M. Carrión-Vázquez
- A mechanical model of the tip-link suggests its role in acoustic mechanotransduction. A. Gómez-Sicilia, L. Laurene-Martínez, J. Oroz, A. Valbuena y M. Carrión-Vázquez
04-09/07/ 2010
International Conference of Synthetic Metals (ICSM), Kyoto 2010, Japan
Oral communications
- Picosecond charge evolution in conjugated polymers. Juan Cabanillas-González, Marta Mróz and Guglielmo Lanzani

19-22/07/2010
17th International Conference on Ultrafast Phenomena (UP 2010), Snowmass Village, USA
Oral communication
- Ultrafast excitation energy transfer in small carbon nanotube aggregates. L. Lüer, J. Crochet, T. Hertel, G. Cerullo, G. Lanzani

22-26/08/ 2010
240th ACS National Meeting, Boston, USA
Poster
- Noncovalent chemistry of π-extended tetrathiafulvalene derivatives and fullerenes”. Perez, Emilio M.; Isla, Helena; Gallego, Maria; Martin, Nazario

23-27/08/2010
International Vacuum Conference and International Conference on Nanoscience and technology, Beijing, China
Oral communications
- Electronic and geometric corrugation of periodically rippled, self-nanostructured graphene epitaxially grown on Ru(0001) S. Barja, B. Borca, M. Garnica, M. Minniti, A. Politano, J.M. Rodríguez-García, J.J. Hinarejos, D. Farias, A.L. Vázquez de Parga and R. Miranda

23-28/08/ 2010
Joint European Magnetic Symposia JEMS 2010 Krakow, Poland
Oral communications
- Substrate-induced magnetic anisotropy in \(La_0.7Sr_0.3MnO_3\) epitaxial thin films grown onto (110) and (1-18) SrTiO\(_3\) substrates P. Perna, E. Jiménez, F.J. Teran, L. Méchin, N. Mikuszeit, J. Camarero and R. Miranda

29-08- 02-09/ 2010
European Conference on Surface Science, Groningen, Netherlands
Oral communications
- 2D molecular self-assembly as a template for magnetic frameworks. J.M. Rodríguez-García, B.Borca, J.J. Hinarejos, A.L. Vázquez de Parga, R. Miranda

29-08- 02-09/ 2010
DIPC Workshop on Inelastic Transport Phenomena, San Sebastián, Spain
Poster
- Spatially resolved IETS of epitaxial graphene on Ru(0001) A Castellanos-Gomez, B Borca, S Barja, M Garnica, A. Vázquez de Parga, R Miranda, G Rubio-Bollinger, N Agrait
12-15/09/ 2010
Joint Meeting Fundamentals of Molecular Electronic Assemblies (FUNMOLS): Mid Term Review and Nanoelectronics: Concepts, Theory and Modelling (Nano-CTM), Malvern, UK

Oral communication

Poster

12-17/09/ 2010
Joint Meeting Fundamentals of Molecular Electronic Assemblies (FUNMOLS): Mid Term Review and Nanoelectronics: Concepts, Theory and Modelling (Nano-CTM), Malvern, UK

Posters

13-17/09/ 2010
NANO2010, Rome, Italy

Oral communication

27-29/09/ 2010
Fuerzas y Túnel 2010, Tarragona, Spain

Oral communications
· 2D molecular self-assembly as a template for magnetic frameworks. J.M. Rodríguez-Garcia, B. Borca, J.J. Hinarejos, A.L. Vázquez de Parga, R. Miranda

Poster

28-29/10/ 2010
I Workshop of Computational Photonics, Valencia, Spain

Oral communication
· DNA polymerase: a catalytic nanomachine with a 2-bit processor. J.R. Arias-González

14-18/11/ 2010
Magnetism & Magnetic Materials 2010 Atlanta, USA

Oral communication
15-17/11/2010
Current Trends in Biomedicine. The centrosome: structure, function and dynamics. Baeza, Spain
Poster

19/11/2010
Yale Sackler Symposium for Biological, Physicla and Engineering Sciences. New Haven, CT, USA
Poster
· Self-assembly of designed proteins into nanostructured films. Aitziber L. Cortajarena, Tijana Z. Grove, and Lynne Regan

10-12/11/2010
NANOLITHO 2010, Oviedo, Spain
Oral communication
· Kagomé-like array with symmetric pinning centers. David Perez de Lara, E.M. Gonzalez, A. Alija, J.I. Martin, M. Velez and J.L. Vicent

10-14/11/2010
Workshop Frontiers in interface physics: microfluidics, bimembranes and nanostructures, Benasque, Spain
Poster
· Modulating self assembly of cytoskeleton proteins on lipid bilayers. Mario Encinar and Marisela Vélez

14-18/11/2010
Magnetism & Magnetic Materials 2010 Atlanta, USA
Oral communications
· Magnetization reversal in half metallic La$_{0.7}$Sr$_{0.3}$MnO$_3$ films grown ontovicinal surfaces. P. Perna, C. Rodrigo, E. Jiménez, F.J. Teran, L. Mèchin, N. Mikuszeit, J. Camarero and R. Miranda

29-11-03-12/2010
MRS Fall Meeting 2010 Boston, USA
Oral communication

06-10/12/2010
ElecMol10: 5th International Meeting on Molecular Electronics, Grenoble, France
Posters
· Contacting single molecules with a scanning tunneling microscope, C. Evangeli, E. Leary, M. T. González, N. Agraït.

15-2012//2010
PACIFICHEM: Honolulu, HI, USA
Oral communication
· Carbon-based compounds for the preparation of efficient photovoltaic devices, Juan L. Delgado.
4.3. Seminars & lectures

20/12/2009
· Optoelectronic probing of organic based devices. Juan Cabanillas. University of Nicosia, Cyprus

20/01/2010
· Semiconductor nanostructures for quantum optics and quantum information. Daniel Granados. Instituto de Microelecbronica de Madrid (IMM-CSIC), Madrid, Spain

21-23/01/2010
· Ultrafast energy and charge transfer in optoelectronic materials. L. Luer First European Symposium on computing pi-conjugated compounds, Institute of Molecular Science (ICMol), University of Valencia, Spain

28 & 29/01/2010
· Concave-convex supramolecular interactions: optimizing electroactive fullerene receptors. Nazario Martin
  - University of Pierre et Marie Curie, Paris, France 2010
  - University of Angers, Angers, France 2010

14-19/02/2010
· XI Escuela Nacional de Materiales Moleculares. Universidad de Valladolid. Peñafiel, Valladolid, Spain
  - Celulas fotovoltaicas Juan L. Delgado
  - Synthetic molecular machines Emilio Pérez
  - Fullerenos y otras nanoestructuras de carbono Nazario Martín

03/03/2010 & 13/09/2010
· Unveiling physics in biology by mechanical manipulation of single molecules. Ricardo Arias
  - Instituto de Cerámica y Vidrio (CSIC), Madrid, Spain
  - CIC-Nanogune, San Sebastián, Spain

18/03/2010
· Fluorination of conjugated organic materials: tuning of ground and excited state properties. Johannes Gierschner. Institute for Physical & Theoretical Chemistry, University of Tübingen, Germany

24/03/2010
· Impact of fluorination on the structure, optics and photophysics of conjugated materials. Johannes Gierschner. Department of Materials Science and Engineering, Seoul National University, South Korea

31/03/2010
· 3D Energy transfer in weakly coupled supramolecular architectures. Johannes Gierschner. School of Chemistry, Seoul National University, South Korea

01/04/2010
· Bandgap engineering of conjugated co-polymers by orbital design. Johannes Gierschner. SKKU Advanced Institute of Nanotechnology, Sungkyunkwan University, Suwon, South Korea

13/05/2010
· Organic optoelectronics: the contribution of ultrafast spectroscopy. Juan Cabanillas. Universidad Pablo de Olavide de Sevilla, Sevilla, Spain

14/05/2010
· Optical and electronic properties of conjugated organic materials: a lesson from spectroscopy and theory. Johannes Gierschner. Physics Department, University of Alicante, Spain

19/05/2010
· Quantum optics and quantum information with semiconductor nanostructures: single photon emission, entanglement and strong coupling. Daniel Granados. Instituto de Ciencia de Materiales de Madrid (ICMM-CSIC), Madrid, Spain
25-26/05/2010

22/06/2010
- Bandgap engineering of conjugated co-polymers by orbital design. Johannes Gierschner. Laboratory for Chemistry of Novel Materials, University of Mons, Belgium

24/06/2010
- Electronic, optical & photophysical properties of conjugated organic materials: at the crossroad of spectroscopy and theory. Johannes Gierschner. Unité Physico-Chimie et de Physique des Matériaux (PCPM), Université Catholique de Louvain, Belgium
- Heteroleptic Ir-complex Dyads: Following the Deactivation Pathway. Johannes Gierschner. Department of Materials Science and Engineering, Seoul National University, South Korea

16/07/2010
- III Escuela de Verano sobre Historia de la Química. UR2010. Átomos y Moléculas en congreso. 150 años después del Congreso de Karlruhe. Logroño, Spain
  - Una historia de la Química actual: las nanoformas del carbono. Nazario Martín

19-23/07/2010
- Universidad Complutense de Madrid. Summer Courses 2010. Nanociencia y su Impacto Social. El Escorial, Spain
  - Introducción a la Nanociencia Molecular. Nazario Martín.
  - Transporte electrónico a través de moléculas individuals. Nicolas Agrait
  - Grafeno epitaxial: un nuevo nanomaterial. Rodolfo Miranda Soriano
  - Nanociencia a través de la imagen: las nuevas herramientas. Mesa redonda. Rodolfo Miranda Soriano, Nazario Martín & Nicolas Agrait

20/09/2010
- Nanotechnology and nanoscience: from IFW to IMDEA Nanociencia. IFW-Dresden. Institute of Metallic Materials, Dresden, Germany. Alberto Bollero

12/10/2010
- Structural polymorphism of FtsZ polymers formed on different surfaces. Marisela Vélez. Mesa Institute of Nanothechnology, Enschede, Netherlands

24-29/10/2010
- Fullerenedes organic electronics. Nazario Martín III European School on Molecular Nanoscience. EsMolNa, Miraflores de la Sierra, Madrid

01/11/2010
- Single molecule junctions: inelastic spectroscopy and transport. N. Agrait, Department of Physics Basel University

09/11/2010
- Modulating self assembly of cytoskeleton proteins on lipid bilayers. Marisela Velez. Universidad de Barcelona, Spain

17/11/2010
- Structural polymorphism of FtsZ polymers formed on different. Marisela Velez. (Instituto de Microelectrónica. Tres Cantos, Madrid)
4.4. Seminars at imdea nanociencia

22/01/2010
- Observing angular deviations in the specular reflection of a light beam
  Dr. Michele Merano Huygens Laboratory, Leiden University, The Netherlands
- Theoretical studies in the nanometer and femtosecond scales
  Dr. Annapaola Migani Departament de Química Física and Institut de Química Teòrica i Computacional (IQTCUB), Universitat de Barcelona, Barcelona, Spain

26/01/2010
- Exchange coupling and magnetization dynamics in thin magnetic films studied by photoemission electron spectromicroscopy
  Dr. Jorge Miguel, Institut für Experimentalphysik, Freie Universität Berlin, Arnimallee, Berlin, Germany

01/02/2010
- DFT-based approaches to the geometry, reactivity and STM/STS imaging of nanostructured surfaces
  Dr. Gilberto Teobaldi The Institute of Scientific and Industrial Research (ISIR), Osaka University, JAPAN & Department of Physics and Astronomy, University College London, London, UK

05/02/2010
- Spintronics with single molecules and atoms
  Prof. J.P. Bucher Institut de Physique et de Chimie des Matériaux de Strasbourg, UMR 7504, Université de Strasbourg, 67034 Strasbourg, France

08/02/2010
- Novel effects in magnetism, spintronics and photonics of molecular nanomaterials
  Dr. Alessandro Soncini, Institute for Nanoscale Physics And Chemistry (INPAC), Chemistry Department, Katholieke Universiteit Leuven, Belgium
- Friction control and particle manipulation on the nanoscale: a ten-year summary
  Dr. Enrico Gnecco, National Center of Competence in Research “Nanoscale Science”, Department of Physics - University of Basel, Switzerland

19/02/2010
- Fluorescent organic nanowires: supramolecular assembly, enhanced emission, charge transfer, and switching
  Prof. Dr. Soo Young, Park Department of Material Science and Engineering Seoul National University, South Korea

22/02/2010
- Design of new materials based on carbon nanostructures and overcrowded polycycles
  Dr. Fulvio G. Brunetti, Center for Polymers and Organic Solids University of California, Santa Barbara

23/02/2010
- Nanomagnets for future ultrahigh density magnetic recording media
  Dr. Luo Feng, College of Engineering, Peking University, Beijing, China

05/03/2010
- How the local environment affects the Kondo screening of a high-spin atom
  Dr. Cyrus F. Hirjibehedin, London Centre for Nanotechnology Department of Physics & Astronomy Department of Chemistry UCL
- Nano- and micro-structuring of plastics for organic lasers and solar cell applications
  Dr. Mariano Campoy Quiles, Nanostructured Materials Group, Institute of Material Science of Barcelona (ICMAB-CSIC)
15/03/2010
- Matter modification by ultrafast lasers: from atoms to optical chips
  Dr. Jovana Petrovic, European Laboratory for Non-Linear Spectroscopy LENS, Florence, Italy
- Super-resolution fluorescence imaging of DNA topology
  Dr. Cristina Flors, School of Chemistry and Collaborative Optical Spectroscopy Micromanipulation & Imaging Centre (COSMIC) University of Edinburgh, UK

23/03/2010
- Organic thin films: structure, physical properties, and applications
  Corneliu N. Colesniuc, M.S Physics Department, University of California, San Diego, USA

16/04/2010
- Photoinduced energy and charge transfer in conjugated polymers
  Dr. Aránzazu Aguirre, Molecular Materials and Nanosystems Eindhoven, University of Technology, Eindhoven The Netherlands

20/04/2010
- Espectroscopía e interferencia cuántica en un átomo artificial
  Dr. Sergio O. Valenzuela, ICREA y Centre d’Investigació en Nanociencia i Nanotecnologia (ICN-CSIC), Barcelona, España

12/05/2010
- Manipulating magnetization reversal mechanisms of nanostructures with perpendicular anisotropy
  Dr. Kai Liu, Physics Department, University of California – Davis, USA

17/05/2010
- Electron transport through single molecules studied with a scanning tunneling microscope
  Dr. Wolfgang Haiss, University of Liverpool, Department of Chemistry and Liverpool Institute for Nanoscale Science, Engineering and Technology (LINSET)

28/05/2010
- Hybrid semiconductor structures based on combinations of light-emitting polymers and iii-nitrides
  Dr. Grigorios Itskos, Department of Physics, University of Cyprus, Cyprus

26/06/2010
- Micro and nanofabrication of polymer based functional devices
  Dr. Isabel Rodríguez, Institute of Materials Research and Engineering (IMRE) - Agency for Science, Technology and Research (A*STAR). Singapore

09/07/2010
- Electrons nonadiabatic chemical dynamics at metal surfaces
  Prof. Alec M. Wodtke, Georg-August University of Göttingen and the Max Planck Institute for BiophysicalChemistry, Göttingen, Germany

12/07/2010
- Forma y función de nanoestructuras de carbono. Prof. Humberto Terrones
  Profesor Visitante del Instituto de Materia Condensada y Nanociencias de la Universidad Católica de Lovaina, Bélgica

17/09/2010
- Mechanostability of proteins and virus capsids
  Prof. Dr. Marek Cieplak Institute of Physics, Polish Academy of Science, Warszawa, Poland

07/10/2010
- Methodology for searching new superconductors: the La-Si-C system
  Dr. José de la Venta, Physics Department University of California-San Diego, La Jolla, California, USA

22/10/2010
- Unimolecular electronics
  Prof. Robert M. Metzger, Department of Chemistry, The University of Alabama, Tuscaloosa, USA
4.5. Scientific outreach activities

4.5.1. Talks

19/01/2010
Nanociencia: lo importante de lo pequeño. Nazario Martín. Universidad de Huelva. Huelva, Spain

25/02/2010
Exciton coupling and transport in conjugated organic materials. Johannes Gierschner. Nanomatch Workshop, University of Tübingen, Germany

01/04/2010
Procesos biológicos en superficies a escala nanométrica: primeras etapas de la división bacteriana. Marisela Vélez. Instituto de Química Física “Rocasolano” (CSIC), Madrid, Spain

16-16/04/2010

15/06/2010
Biofísica de centrosomas y ADN mediante manipulación óptica. Silvia Hormeño. ICMM, Madrid, Spain

16/06/2010
Biofísica de centrosomas y ADN mediante manipulación óptica. Silvia Hormeño. ICMM, Madrid, Spain

12 & 19/05/2010
Nanociencia y Nanotecnología: un viaje al futuro desde lo pequeño. Elías Herrero I.E.S. “Jaime Ferrán” de Collado Villalba. Spain
21/05/2010
Seminarios-Café Instituto Nicolás Cabrera, Universidad Autónoma de Madrid, Spain
- Pinzas ópticas para el análisis de moléculas individuales: una nueva visión de la replicación del DNA. Borja Ibarra
- Unveiling physics in biology by mechanical manipulation of single molecules. Ricardo Arias

20/06/2010
Ultrafast dynamics of optoelectronic material. L. Lüer. Tutorial. Summer School of the BIMORE Network, Billund, Denmark

14/07/2010
Organic photovoltaics: a chemical approach. Nazario Martín. Instituto Catalán de Investigación Química ICIQ, Tarragona, Spain

10/08/2010
La formación universitaria fuera de las aulas: nuevas ideas y oportunidades. La organización y la Gestión. Francisco Terán. Universidad Internacional Menéndez Pelayo UIMP, Santander, Spain

17/08/2010
La calidad de la investigación en las diferentes áreas científicas. Rodolfo Miranda. Escuela “Blas Cabrera” de Introducción a la investigación, la docencia y la innovación. Universidad Internacional Menéndez Pelayo UIMP, Santander, Spain

17/09/2010
Preparing a MultiFun proposal. Francisco Terán. Info day about NMP-2011 Calls in the VII Frame Program, Headquarters of Centro para el Desarrollo Tecnológico e Industrial, Madrid, Spain

28/09/2010
Periodically rippled epitaxial graphene: an electronically and structurally nanostructured material. Rodolfo Miranda. PASSION FOR KNOWLEDGE, CIC Nanogune, San Sebastián, Spain

07/10/2010
Defensa y Nanotecnología. Rodolfo Miranda. Ciclo de Conferencias del Ministerio de Defensa en la Universidad Autónoma de Madrid, Madrid, Spain

19/10/2010
Interacciones Supramoleculares cóncavo-convexo. Nazario Martín. XIV Semana Científica Antonio González. Universidad de la Laguna, Tenerife, Spain

15/10/2010
Practical Aspects of Optical Spectroscopy. Johannes Gierschner. Tutorial. Department of Materials Science and Engineering, Seoul National University, South Korea

22/10/2010
Aspects of UV/Vis Spectroscopy: Light scattering, Polarized and Time-resolved Fluorescence. Johannes Gierschner. Tutorial. Department of Materials Science and Engineering, Seoul National University, South Korea

19/10/2010
The B-A transition in DNA: a study at the single-molecule level. Ricardo Arias. Universidad de Barcelona, Spain

Nanociencia: La importancia de lo pequeño. Nazario Martín

11/11/2010
Universidad San Pablo CEU, Madrid, Spain

16/11/2010
Universidad de Alicante, Spain

19/11/2010
Universidad de Zaragoza, Spain
4.5.2. Outreaching activities

4.6. Workshops & courses (Co)-Organized by Imdea-Nanociencia

23-21/01/2010
Organization of the 1st European Symposium on Computing πConjugated Compounds (CΠC), Valencia, Spain

25-26/02/2010
Organization of the NANOMATCH Workshop on Optical Spectroscopy and Microscopy Tübingen, Germany

06-11/06/2010
Co-organization of the European Spring School 2010 on Supramolecular Organized Nanostructured Materials for Optoelectronic Applications, Alghero, Italy

19-23/07/2010
Organization of the course Nanociencia y su Impacto Social. Universidad Complutense de Madrid Summer Courses 2010. El Escorial, Spain

19-24/07/2010
Co-organization of Physical Chemistry of Biointerfaces Workshop, CIC biomaGUNE, San Sebastián, Spain

27-29/09/2010
Co-organization of Fuerzas y Túnel 2010, Tarragona, Spain

22-29/10/2010
Co-organization of the III European School 2010 on Molecular Nanoscience, Miraflores de la Sierra, Madrid, Spain

11 & 17/11/2010
Contributions to X Semana de la Ciencia. Madrid, Spain. IMDEA-Nanociencia guided tour for high schools
  - Conferences.
  - Nanociencia y Nanotecnología: grandes ideas para mundos pequeños. Adriana Martín
  - Highly efficient organic photovoltaic cells: the nanostructure is the key. Larry Luer

Sponsorships

15/06/2010
Ciencia y Sugerencia. Awards 2010
http://www.cienciaysugerencia.es/
4.7. Institutional activities

Participation in the UAM+CSIC International Campus of Excellence

13/01/ 2010
Placement of the foundation stone of the building of the Madrid Institute for Advanced Studies in Nanoscience (IMDEA Nanociencia)

01/02/ 2010
Marie Curie Actions: Inspiring Researchers and IMDEA Nanociencia Institute
http://ec.europa.eu/research/mariecurieactions/docs/inspiring_researchers_en.pdf

03/ 2010
Incorporation to the Network of Research Laboratories of Comunidad de Madrid (REDLAB)

22-23/02/ 2010
Participation in the Plataforma Española de Nanomedicina Meeting, organized by Nanomed-UII. Barcelona, Spain

04/05/ 2010
Participation in the Nanomedicine Partnering Day Meeting, organized by Nanomed-UII. Barcelona, Spain

01/06/2010

30/06/2011
Collaboration with madri+d in “INFO Day. FP7 PEOPLE PROGRAME”. Madrid, Spain

24/09/2010
Participation in “La noche de los investigadores. Por qué soy científico”. Madrid, Spain

15/11/2010
Collaboration with madri+d in “INFO Day. HACIA EL OCTAVO PROGRAMA MARCO. La visión de los agentes del sistema regional de I+D sobre el BPM”. Rodolfo Miranda. Madrid, Spain

18/11/2010
Incorporation to the EURAXESS Services Local Contact Point. IMDEA Nanociencia. Madrid, Spain
4.8. Academic activities

4.8.1. Participation in

- Interuniversity Master’s Degree in Molecular Nanoscience and Nanotechnology
- Interuniversity Master’s Degree in Condensed Matter Physics and Nanotechnology
- Master’s Degree in Biophysics
- Master’s Degree in Nanotechnology
- Doctoral Program in Protein Structure and Function
- Doctoral Program in Molecular and Cell Biology

4.8.2. PhD Thesis

- May 5, 2010 Biophysics of centrosomes and DNA studied by optical manipulation. Silvia Hormeño Torres, Universidad Autónoma de Madrid. Advisors: Ricardo Arias and Jose Mª Valpuesta
- May 21, 2010 La nanomecánica de proteínas en enfermedades humanas: sordera hereditaria y parkinson. Javier Oroz Garde. Advisor: Mariano Carrión
- December 17, 2010 Nanoscale Ordering of Coordination Compound and Networks at Solid Surfaces. Marta Trelka. Advisors: Dr. Roberto Otero and Dr. José María Gallego

4.8.3. Master

4.8.3. Internships

- 1 June - 31 August & 20 September - 20 December, Al Taleb Amjad. Dynamical properties of graphene on Ru(0001). Istituto Universitario di Studi Superiori di Pavia, Italy
- 1 June - 31 August, Prashant Verma. Electron transfer through single molecules. Indian Institute of Technology, Kharagpur
- 20 September - 20 December, Ramón Bernardo Gavito. An introduction to scanning nearfield optical microscopy (SNOM). Universidad Complutense de Madrid
- 20 September - 20 December, Javier López Andarias. Organización jerarquizada de nanoestructuras a partir de bloques de construcción opto-electrónicos. Universidad de Castilla la Mancha
- 20 September - 20 December, Leonor De La Cueva Castillo. Electrochemical studies of quantum-dots decorating carbon nanotubes. Universidad Complutense de Madrid
- 20 September - 20 December, Alberto Sanz de León. Preparación de superficies poliméricas con aplicación en la elaboración de sensores. Universidad de Sevilla
4.9. Projects & fellowships

4.9.1. Projects

1. Dr. Johannes Gierschner. Marie Curie Research Training Network. NANOMATCH: Supramolecular nanostructured organic / inorganic hybrid systems MRTN-CT-2006-035884. (Coordination) www.nanomatch.eu

2. Dr. Larry Luer, Marie Curie Research Training Network BIMORE: Bio-inspired approaches molecular (opto)electronics (Coordination) http://www.bimore.eu

7. Dr. Aitziber López-Cortajarena, Dr. Álvaro Somoza and Dr. Francisco Terán FP7-NMP-2010-LARGE-4. MULTIFUN: MultiFunctional Nanotechnology for Selective Detection and Treatment of Cancer. MULTIFUn. nº 262943-2

8. Prof. Fernando Martín. European Science Foundation. COST Action. Chemistry with Ultra-Shorts Pulses and Free-Electron Lasers: looking for control strategies through "exact" computations. CM0702-1

9. Dr. Juan Cabanillas. Ministerio de Ciencia e Innovación. Subprograma TEC. Amplificadores ópticos basados en polímeros conjugados para sensores químicos. TEC2010-21830-C02-02

10. Dr. Álvaro Somoza. Ministerio de Ciencia e Innovación. Subprograma SAF2010-15440. “Oligonucleótidos modificados en Medicina: Detección de secuencias de ácidos nucleicos e inhibición de la expresión génica mediante ARN interferente”. Dr. Somoza also participates in CSIC/NSC “FORMOSA PROGRAM” COOPERATIVE RESEARCH PROJECTS (CRPs). Characterization Of Novel Drug Delivery Systems 2009TW0031

11. Dr. Francisco Terán. Ministerio de Ciencia e Innovación. Subprograma MAT. Optimisation of functional NANOparticles as a novel, minimal-invasive and efficient therapy for targeting Cancer Stem Cell (NANOvsCSC). MAT2010-21822-C02-01

12. Dr. Mariano Carrión. Ministerio de Ciencia e Innovación. Subprograma BIO. Nanomecánica del Sistema Cadherina: Cadherinas Sinapticas y Auditivas. BIO2010-22275

13. Dr. Emilio Pérez. Mechanically interlocked carbon nanotubes (MINT). European Theoretical Spectroscopy Facility. 10.000 hours calculation time

14. Dr. Teresa González. Participates in Ministerio de Ciencia e Innovación. Subprograma MAT. Transporte eléctrico a través de moléculas individuales y nanocintas de grafeno. MAT2008-01735.
15. Dr. Juan Luis Delgado and Dr. Emilio Pérez. Participate in Ministerio de Ciencia e Innovación “Acción de Coordinación España-Japón. Fullereno endoeédrico químicamente modificado para aplicaciones fotovoltaicas (FullSol@r). PLE-2009-0168.

17. IMDEA Nanociencia. Convocatoria de Ayudas para la realización de Programas de Actividades de I+D entre grupos de investigación de la Comunidad de Madrid
   a) S2009/MAT-12726 NANOBIMAGNET: fundamentos y aplicaciones de moléculas, nanopartículas y nanoestructuras magnéticas: de la espintrónica a la biomedicina. Coordination: Rodolfo Miranda
   c) Marisela Velez and Mariano Carrion participate in S2009/MAT-1507 NOBIMAT-M. Nuevos materiales y dispositivos biofuncionales híbridos en Nanociencia. Coordination: J. López Carrascosa

18. Julio Camarero invited researcher at:
   a) Sincrotron ESRF, beamline ID8 Grenoble, Francia April 2010 2 weeks
      Experiment HE 3270: Investigation of the magnetisation reversal and the uncompensated moments in perpendicular exchange bias systems by soft x-ray holography
   b) Sincrotron Soleil, beamline ID8 Grenoble, Francia May 2010 2 weeks
      Experiment HE 3273 (ESRF) N° 20090726 (Soleil): Influence of Oersted fields on current-induced domain wall motion studied by time-resolved XMCD-PEEM

4.9.2. Fellowships

  - Incoming Fellowships: Paolo Perna, Larry Luer and David Canivet, Enrico Gnecco, Feng Luo
  - Reintegration Fellowships: Aitziber Lopez-Cortajarena

- Incentive for the Incorporation and Intensification of Research Activity (I3) Fellowships, Spanish Ministry of Science and Innovation, 2009. Dr. Mariano Carrión

- José Castillejo Programme. Mobility Grant. Spanish Ministry of Education. 2010. Dr. Aitziber Lopez-Cortajarena

- FPU Programme. Predoctoral Grant. Spanish Ministry of Education. 2010. Adriana Martín
4.10. External contracts

4.11. Honors

Prof. Fernando Martín Real Sociedad Española de Química Prize 2010

Dr. Emilio Pérez. Joven 2010 Science and Technology Prize. Universidad Complutense de Madrid
5. research focus: graphene

5.1. Graphene: The Wonder Nanomaterial [66]
5.1. Graphene: The Wonder Nanomaterial

Graphene was brought into scientific and technological spotlight by an accidental discovery carried out in a dark laboratory in Manchester: ultrathin flakes of graphite, consisting of few uncoupled planes of graphene, unexpectedly display the extraordinary transport properties predicted for a strictly two dimensional layer of C atoms with a herringbone arrangement of atoms.

Time and again a single discovery generates a scientific and technological revolution. Graphene is the last case, an example that has deserved the Nobel Prize for Physics in 2010 to André Geim and Kostya Novoselov, who discovered it on a dark Friday afternoon in Manchester in 2004 and started a gold rush all over the world.

In the short period of time since its discovery, researchers have found that the properties of graphene are truly extraordinary. Graphene is the realization of the ultimate nanomaterial. It is just a single atom thick. All its atoms, therefore, are at the surface. And the surface is a weird world indeed.

Charge carriers show a mobility much higher in graphene than in any other material. Ballistic transport (i.e. without collisions) of both charge and spin has been observed for thousand of nanometers. Both characteristics have been already exploited in high-speed analog transistors. The current densities in graphene are 1 million times larger than in copper, although this property has not been utilized for practical applications yet.

The mechanical properties of graphene are simply amazing. It has a strength 20 times larger than steel, still it can be elastically stretched more than 20%. Being hard and flexible, important applications of graphene in strong, light-weight nanocomposite materials for aerospace applications are feasible.

Graphene is 97% transparent to visible light, yet electrically conductive, which makes it an excellent candidate to replace present materials as transparent electrodes in touch screens and solar cells.

The production of graphene for most of these applications by mechanical exfoliation, however, is a lengthy, costly and non-scalable procedure. It was essential to find out practical methods to grow laterally extended single layers of graphene with enough structural perfection. Research carried out at IMDEA Nanociencia has played a recognized role in the seminal discovery of a method to grow epitaxial single layers of graphene by Chemical Vapor Deposition on many metal surfaces [1-3]. The method, reported in 2008, has yielded centimeter wide, periodically rippled monolayers of graphene, where many basic properties have been discovered [4-8] since, and many potential applications are presently envisaged in labs worldwide.
Graphene has another aspect, also pioneered at IMDEA Nanociencia, namely, it constitutes a perfect, inert substrate to explore one of the biggest scientific challenges: understanding the self-organization of organic matter to generate complex, functional structures. To this end, the self-assembled structures spontaneously produced by organic molecules deposited on graphene can be studied with unprecedented detail and control [9], something that might also be relevant for applications in organic solar cells and a variety of molecular sensors.
